DETAILED ACTION
REASONS FOR ALLOWANCE

Claims 1-2, 4-13 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a method of detecting a boundary of a content item in a digital video stream.

The following is a statement of reasons for the indication of allowable subject matter: The independent claim 1 identifies the uniquely distinct feature for "determining, in a processor, an average bit rate of an incoming digital video stream over a period of time; detecting locations of shot-cuts in the digital video stream; adjusting the period of time in the determining step based on the detected shot-cut locations; and detecting, in a detector, a change of the average bit rate, a location in the video stream of the change in the average bit rate being indicative of a boundary of the content item".

The following is a statement of reasons for the indication of allowable subject matter: The independent claim 10 identifies the uniquely distinct feature for "means for detecting locations of shot-cuts in the digital video stream; means for adjusting a period of time based on the detected locations of shot-cuts; means for determining a moving average bit rate of a the digital video stream over the period of time; and means for detecting a change of the moving average bit rate, a location of said detected change being indicative of the boundary of the content item".

Okuyama et al., US 2005/0276567 discloses if programs are always recorded according to a decision that is made-based on the user preferences survey results or specific categories and user's recording instruction, the user will lose the opportunity to view programs of categories other than the user preferences. Further, if the entire viewable broadcast is recorded without any selection, a problem arises that there are required greatly increased storage capacity and greatly increased capacity of processing the bit rate required for the recording. According to the present invention, a rate converter is provided for changing a bit rate for each channel, the history of programs that have been viewed by the user is recorded as the usage history, the usage tendency of the user is extracted from the usage history with an agent, a decision is made as to whether the program selected for each channel matches the usage tendency of the user, and in case of matching the program is recorded on the recording medium without varying a bit rate allowing the high-quality video to be maintained, whereas when the selected program does not match the usage tendency of the user, the program is recorded on the recording medium upon conversion to a lower bit rate.

Dimitrova et al., US 2002/0186768 discloses the process of compressing video requires the calculation of a variety data that are used in the process of compression. The invention exploits some or all of these data for purposes of content detection. For example, these data may be leveraged for purposes of commercial detection. The luminance, motion vector field, residual values, quantizer, bit rate, etc. may all be used either directly or in combination, as signatures of content. A process for content

Art Unit: 2484

detection may employ one or more features as indicators of the start and/or end of a sequence containing a particular type of content and other features as verifiers of the type of content bounded by these start/end indicators. The features may be combined and/or refined to produce higher-level feature data with good computational economy and content-classification utility.

None of the prior art, either singularly or in combination, fails to anticipate or render the above underlined limitations obvious. Claims 2, 4-9, 11, 13 are dependent on claims 1, and 10 and therefore dependent claims also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
